Study Specifications, plans, and Special Provisions.				
Ensure that the correct quantity and quality of material are used to produce the correct typical section. (Make allowance for some swelling when plowing for seeding.)				
Require the Contractor to perform shaping and compaction of shoulder material reasonably soon after the material has been placed.				
Do not permit the use of equipment on the completed base or pavement which exceeds highway load limits or which damages the surface of the pavement.				
Check conformity to typical section and require Contractor to correct any deficiency.				
Record all conversations, observations, spot checks made, and work performed in the daily diary.
